

Water is used for washing and keeping clean. This is important for good health.

Water is often used in cooking. We also need to drink water every day.

Water is used to wash things like dishes and clothes.

Water can be pumped out of the ground. This well is covered to keep the water clean.

Water has to be carried from the well back to the village. It can be a very long walk.

Not all water is clean. When water is dirty it is not safe to drink, cook or clean with, but some people do not have a choice. This may be the only water they have access to.
